### **Lotus Lantern**

#### **a) Type, format, and estimated amount of data generated by the product**

Customer description:

The Smart LED Strip generates data related to:

- the current device status (on/off),
- brightness and color settings,
- user interactions with the app (e.g., changes in settings).

The data is stored in **.sqlite format for IOS and .db for Android**. All user data is stored locally. The estimated amount of data generated is approximately **3–8 KB per day** under typical usage conditions.

---

#### **b) Whether the product generates data continuously and in real time**

Customer description:

Yes, the Smart LED Strip generates data continuously and in real time while it is active and connected to the app.

Data is not transmitted after user interaction or change in settings. All settings are saved locally on the device.

---

#### **c) Whether the product stores data on the device or a remote server, and the data retention period**

Customer description:

Data is stored:

- on the device (until the app is uninstalled)

Upon deleting the app, the data is automatically deleted.

---

**d) Method for user access, download, or deletion of data**

Customer description:

The user can:

- delete corresponding newly added settings (such as custom colors and DIY designs within the app.
- clear the usage data, by simply uninstall the app.

The data access and deleting is **free of charge** by simple deleting app from device, and the information is provided in a **structured, readable format**.
